

Environmental Education in Kosuge Village

Dr. Laddawan Kanhasuwan

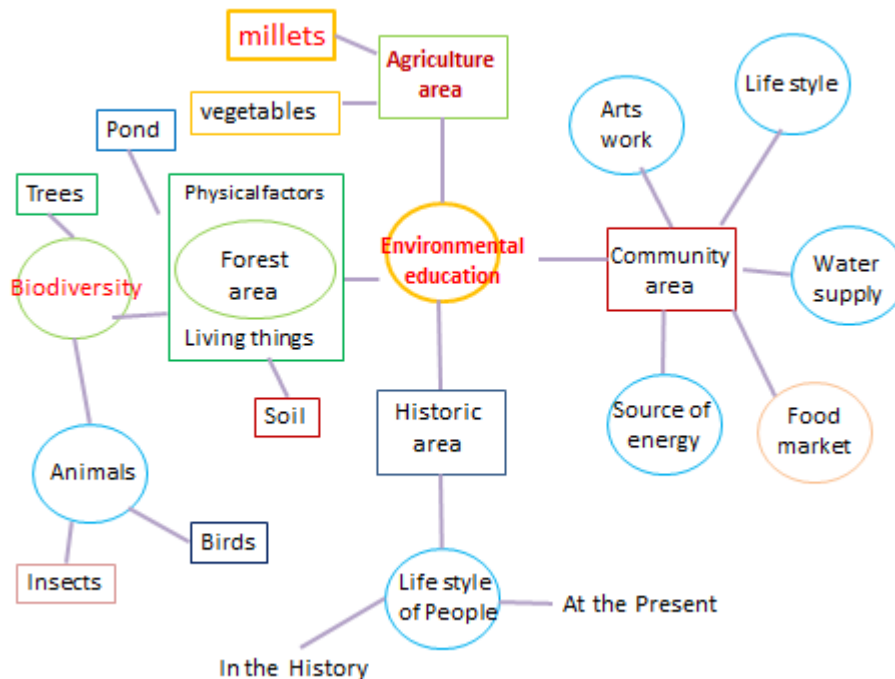

Professor Emeritus of Phranakhon Rajabhat University

Kosuge Village has so many interesting things that are very worthwhile for people to study. If people can learn all about the interesting things they will understand and appreciate in those heritages. Environmental education can help people to have knowledge and understanding as well as good attitude to-wards all heritage of Kosuge Village. Then they will help doing all activities to help conserve all environments of Kosuge Village.

Environment education in Kosuge Village should be developed for 2 target groups. They are students and tourists. Both target groups should have different activities as follows:

1. Students should learn by firsthand experience.
2. Tourists should learn from the information board and the guide book.

The scope of activities and studying area are shown in concept map:

My suggestion of developing environmental education for two target groups are as follow:

1. Select studying areas around the village.
2. Information boards that might be the sound board. People can press the button to hear the information and knowledge about the story each studying area.
3. For the bush area what it should be developed are as follows:
 - * Inquiry board that should be questions that students have to find the answer by themselves. Science experiments can be used to find the answer.
 - * Sensory awareness activities will be interesting for students and increase the appreciation in natural environments in the bush area.
 - * Students workbook will help in doing activities of ecology in different area of the bush.
